PROFESSIONAL SUMMARY

Forward thinking Computer Science and AI with Year in Industry student (1st class avg) and current Data Science Intern at LexisNexis Risk Solutions. Specialising in Snowflake analytics and agentic AI workflows. Proven innovator in rapid learning and automated research - demonstrated by developing the Titanite AGI supply-chain thesis (yielding 4x returns over 2 years) and serving as a non-profit trustee.

EDUCATION

University of Nottingham - BSc Computer Science and AI with Yr in Industry **2024-2028**

SKILLS

- **Languages:** Python | SQL | JavaScript | Java | C
- **Data Science & ML:** Matplotlib | Scikit-learn | NumPy | TensorFlow | seaborn | PyTorch | Pandas
- **Web & Infra:** React | Next.js | PostgreSQL | Snowflake | Supabase | Git | Jira/Trello | Linux

WORK EXPERIENCE

LexisNexis Risk Solutions **Data Science placement | July 2026 - current**

- Leveraged Python and SQL in Snowflake to analyse extensive datasets, performing client health checks, policy and rule evaluations and complex fraud case studies.
- Performed end to end Optimisation work for enterprise clients, enhancing fraud detection accuracy and system performance.
- Engineered internal Streamlit applications and interactive Snowflake dashboards to visualise real-time fraud metrics and client data.

Footprints cec **Systems engineer intern | June 2025 - August 2025**

- Developed a K-Means clustering model for donor segmentation, with data cleaning, feature engineering and strategic visualisation of results for actionable insights.
- Implemented cloud-based solutions that included migrating the CRM from Salesforce to a cost-effective alternative, configuring Google Workspace/Meta Ads, and setting up a new e-commerce and event platform, resulting in over £300 in annual savings.

PROJECTS

Astora Risk - Enterprise Compliance hub **Python , FastAPI, React | PostgreSQL, OAuth 2.0**

- Founded and built an enterprise compliance platform automating financial transaction analysis and shadow IT / restricted fund audits across Xero and Quickbooks.
- Engineered a deterministic rules engine utilising fuzzy string matching and confidence-scored heuristics to automatically parse and split complex multi-category data.
- Architected a multi-tenant backend with token encryption, RBAC, and an automated PDF/CSV doc generator.

Instrument tuner app **Swift, SwiftUI | AudioKit, YIN algorithm, iOS**

- low latency real-time pitch detection using YIN signal processing algorithm and AudioKit for accurate analysis.
- Custom transposition offset logic supporting multiple instruments (Alto/Tenor Saxaphone, Trumpet, Concert pitch)
- Architected with clean MVVM patterns and SPM dependency management.

Titanite Research - AGI sscaling & Macro terminal **Next.js, TS, Python | Agentic Workflows, LLMs**

- Architected a single-tenant, Bloomberg style terminal in Next.js/Typescript featuring real-time macro dashboards, a custom multi-condition Boolean logic (master) signal engine to be used as indicators.
- Engineered a hybrid intelligence pipeline using multi-agent LLM workflows to ingest and structure financial data, SEC 10-K filings, and appropriately filtered news stories.
- Integrated live financial data streams (Finnhub API, Trading212, Google News RSS) with auto-tagging NLP capabilities and webhook alert systems to deliver actionable risk metrics.
